## Metal three-layer system chimneys

### Product: Metal three-layer system chimney

#### Product description

**Chimney vent:** stainless steel 50 (quality 1.4404 under ČSN 10088-1), the thickness of the material depending on the purpose of the chimney – 1.0 mm; 0.8 mm or 0.6 mm;

**Thermal insulation:** stone wool with the bulk density of  $95 \pm 5 \text{ kg.m}^{-3}$  and the minimum melting point of  $1000^\circ \text{C}$ ; thickness of 30 or 50 mm; if the system chimney is used for type C sealed appliances where the combustion air is supplied through the space between the chimney vent and the chimney casing, the insulation wool is replaced by centering sleeves;

**Chimney casing:** stainless steel 20 or 50 (quality 1.4301 or 1.4404 under ČSN 10088-1), material thickness of 0.6 mm

**Use:** for exhaust fumes from solid, liquid and gaseous fuel burning appliances, depending on the thickness of the wall material used for the chimney vent, the type of construction (for under-pressure and overpressure operations) and the quality of the material. (refer to the following statement)
